

Client Meeting 21st August

Welcome

In attendance: Mr Michael Dorrell, Mr Zihao Liu, Mr Joshua Pollard

Apologies: None

Absent: Mr Adam Chambost, Mr Taige Liu, Mr David Yu

Location: Sleep Center, UWA

Meeting opened: 12:00pm

Meeting adjourned: 12:50pm

[12:00] Meeting start

[12:05] Clinicians + researchers will have the same level of access Scenarios:

Research study:

- Access to everyone's identified data
- Access to data as anonymous users
- Sending data to other researchers using a (deidentified) randomised key

Security Implications

- Attaching number to name, what if a hacker gets it.

[12:10] Separate data based on who has access to it Some may want to be able to identify it Casual users can be asked if they want their data used for research (anonymous)

[12:15] May need to separate raine studies, small studies, etc. Security measures Need for a 'superadmin' account to specify which admin accounts have access to which data

[12:20] Extra features:

- Snoring detector (intensity + frequency of snoring) + analytics (Optional in settings)
- Light sensor + analytics (More useful for lights) (Optional in settings)
- Visualisation - Sleep duration, time to bed, actigraphy (bar levels), subjective sleep efficiency ((Total sleep time/total time in bed) * 100)
- Go to after alarm
- Extra info after questions

App: Snorelab - Use as a template?

[12:25] Clinician - Simplified info (Total sleep time)

[12:35] GANTT charts suggested for use

[12:50] Meeting closed
