Client Meeting

Welcome

Location: Sleep Science Boardroom G04

In attendance: Jennifer - Client David - Team Leader Michael Zi Hao Joshua Taige

Apologies: Adam

Meeting opened: 12/9 2:08pm

Meeting Adjourned 2:53pm

Similar Sleep Diary App

Jennifer says:

- I have found an app similar to ours. Data gathered from a conference I attended last week. App developed by a British company
- UI
  - Usage of a visual analogue for some questions
  - Usage if a select button for entering time.
    - Time cannot be entered via keypad.

David asked:

- Can Jennifer send photos of the UI for some ideas

User testing

David asked

- Can we send our app to users for user testing

Jennifer responds:

- Won't test on actual participants due to ethical reasons
- Will test on someone that will mirror the target audience

David responds:

- Link will be shared with Jenifer
- App to test will be sent out in the next two weeks

App (website) Demo

Jenifer gives feedback for current website:

- You [Team R] can decide on the style of the app
- Login

- - Don't go with identification
    - Can use email and password for login
- Data that cannot be stored
  - All personal data besides emails cannot be stored
- Clinicians should not be de-identified
- Researchers should not be de-identified
- The current layout of the website is fine
- It would be nice to have a time select where you can scroll upwards to select times as well as downwards, similar to Doodle
  - e.g. Time start at midday to midday the next day
  - Maybe a checkbox that says past midnight?
- Make the arrows larger for number pickers
  - David responds: it is the default browser setting so it could be difficult to change
- Zihao shows an alternate time picker on Android
  - Jennifer says that is fine
- Include some graphs such as a graph of people's sleep times
- Fine with everything we will start testing to see how everything goes

Identification at sleep science

Jennifer says:

- Each trial patient number is different for each trial
- Each trial starts at 1
- Hard to track specific patients
- Can be tracked via date filters

Sprint 2

Michael asks:

- Do we need to send the app to you by then (Monday Week) or do we also require feedback?

Jennifer responds:

- I am not sure but I will send feedback for you

Michael will check with unit coordinator
